*Version 1 has a 2K RAM which is a 24-pin IC at location 5D.

*Version 2 has an 8K RAM which is a 28-pin IC at location 5D.

Power-up CPU Self Tests

Upon power-up, the CPU board performs a series of self tests of major components. Turn the game on while observing the LEDs on the CPU board. Tests of the PIAs, RAM, and EPROMs are performed automatically and results of the test are indicated by the PIA LED.

With all tests passed, the LEDs illuminate in the following sequence at power turn-on. The PIA and +5V LEDs illuminate immediately. Approximately 1/2-second later the PIA LED goes out and the Blanking LED illuminates; the +5V and Blanking LEDs remain illuminated until the game is turned off. Test failures are indicated with the PIA LED:

PIA LED

Stays On
Flashes 1 Time
Flashes 2 Times
Flashes 3 Times

SUSPECT COMPONENT

One of the 6821 PIAs
6064 RAM at location D5.
EPROM at location B5.
EPROM at location C5.

GAME SPECIFICATIONS

POWER REQUIREMENTS

This game is provided with a 3-prong plug and must be connected to a properly grounded outlet to reduce shock hazard and insure proper game operation. Refer to AC Power Wiring Diagram for transformer connections required for normal, high, and low line conditions.

Normal Line: 109 to 129 Vac (211 to 225 Vac)

High Line: (226 to 235 Vac)

Low Line: 95 to 108 Vac (200 to 210 Vac)

MAJOR ASSEMBLY AND FUSE LOCATIONS

Refer to the Game Illustration (page 2) to identify locations of the major assemblies, and fuse values and locations.

PROM SUMMARY

CPU Board: Location 5C

Sound Board: Locations U17 (Voice ROM 1), U21 (Voice ROM 2), and U7 (Sound ROM)

Display Controller Board: Locations U12 & U14

TRANSPORTATION

To reduce the possibility of damage, observe the following precautions whenever transporting the game. Lower the backbox and secure it to the cabinet. Remove the legs and secure the game within the transporting vehicle.

GAME ASSEMBLY PROCEDURES (Refer to the Game Illustration on page 2)

1. Open the top of the carton and lay it on its side with the bottom of the cabinet down. Using the plastic banding strip as a handle, slide the game out of the carton.
2. Remove all packing material. Locate cabinet legs in filler packing inserts and assembly parts package in the cashbox. There should be four leg levelers, eight leg bolts, three pinballs and a large Allen Wrench used for securing the backbox.
3. Attach leg leveler from the parts package to each leg, make sure that each leveler is threaded through a hex nut before threading it into the leg.
4. Support rear of cabinet and attach rear legs using two leg bolts for each leg.
5. Support front of cabinet and attach front legs using two leg bolts for each leg.
6. While assuring that no cables are being pinched, carefully raise the backbox and secure it in its upright position by inserting the Allen Wrench in the hole in the back of the cabinet and rotating the wrench 270 degrees (3/4 turn).

GAME ILLUSTRATION

7. Remove the backbox keys from the clip on the inside of the coin door and unlock and carefully remove the backglass. Set the backglass aside.
8. Carefully remove the playfield glass and set it aside.
9. Check all connectors in the backbox for loose wire terminations. Reseat any loose wire by pushing in on the terminal.
10. Push on all connectors plugged into the CPU board, Sound Board, Power Supply Boards, and (on insert board) Display board to check that they are properly seated.
11. Check that the fuses on the Power Supply board, PPB board and fuse panel are seated properly.
12. Raise the playfield and support it, by connecting the strap located in the left rear of the cabinet, to the eyebolt on the playfield. (Use the instruction sheet provided in the game to see alternative methods of accessing the playfield bottom.)
13. Check all cabinet cable and playfield lamp board connector terminations.

14. Remove the Plumb tilt from the parts package and install on the panel on the inside left of the cabinet. Note that this game is not equipped with a ball roll tilt.

15. Lower the playfield and level the playfield side-to-side by adjusting leg levelers and using the 2 Way Level located beneath the pricing card on the bottom arch.

16. Using the 2 Way Level below the pricing card, adjust the pitch of the playfield to approximately 8.5 degrees.

NOTE

The playfield incline affects difficulty of play. Use the recommended incline; game difficulty is best varied using game adjustments.

17. Check the plumb tilt and adjust as required.

18. If desired, perform any self tests at this time. With the insert door closed, carefully reinstall and lock the backglass.

19. Place the three pinballs on the playfield near the outhole and carefully reinstall the playfield glass.

20. If desired, make game pricing and Add-A-Ball, Novelty, or 5-Ball Play adjustments at this time.

GAME OPERATION

STANDARD FEATURES

Insert coin(s), the game makes a sound for the first credit and generates sounds for each subsequent coin and the Player 4 display indicates the number of credits posted. Depress the credit button and a start-up sound is produced, the posted credits are reduced by one, Player 1 display flashes, Player 4 display indicates BALL 1, and a ball is served to the plunger trough. Additional players may be added by depressing the Credit button before the end of ball 1.

The second closure (adjustable) of the plumb bob tilt switch tilts the ball in play. Closure of the slam tilt switch in the coin door ends the current game(s).

At the end of each ball, earned bonuses are collected. At the end of the last ball for the last player and after bonuses are collected, the system produces a random 2-digit number (a multiple of 10; 00 to 90) for a Match feature (adjustable). Matching the last two digits of a player score with this number awards a credit. Players exceeding high score levels receive free credits (adjustable) and are able to enter their initials with the new High Score achieved. The game then proceeds into the game-over mode and then to the attract mode. A custom message (adjustable) can be displayed during the attract mode.

MANUAL PERCENTAGING

This game is equipped with Manual Percentage Adjustment.

As previously with our games, you can either set operator adjustments for a replay percent or you can set a fixed replay score.

If you set operator adjustments for a particular replay percent, the game will compute a recommended score to keep the game at that replay percentage. If a change is recommended and the game coin door is opened, the displays will indicate a recommended replay score to beat and make a sound to alert the operator. By pressing the start button, the score to beat will be changed to the recommended level. If you close the coin door or go into audit or adjustment mode, no score change will be made.

You may choose to ignore the recommended change; for example, you may not think last week's players were the usual crowd. Just close the door and the message will disappear without altering the existing level. Or you may choose to make a different score to beat adjustment; this is done by utilizing adjustment AD02.

GAME SPECIFIC FEATURES

SKILL SHOT

Use the Fire Button (1) on Shifter Handle(2)
(Located on the front of the cabinet)
to shoot the moving ship in the display.
The awards are 2 Million (ball #1),
3 Million (ball #2) & 4 Million (ball #3).

STAR WARS

STAR WARS letters (5) are lit by completing
the left or right orbit shots (6) or the
Ramp (13) .
Right return lane (7) to left orbit (6) will spot 2
letters.(5). Competing all letters
awards 10 Million

SARLACC PIT

Shooting the scoop (8) awards 500,000
points. Each Turbo Bumper made adds
20,000 points to the Sarlacc Value.

JABBA THE HUT

Left Return lane (9) to right scoop (8) awards
the Jabba Feature which randomly
dispenses one of 15 Features
ie. Bonus Hold, Advance Multiplier etc.

THE FORCE

Shoot lane (10) when lit to lite
Force Scoop (11). Shoot the Scoop (11) to
collect 1 of the 4 awards shown on the
Display. Collect all 4 awards to reveal the
hidden award behind the 4
Displayed. Shooting the Force scoop again
awards the hidden feature.
See the Dark Side (page 5).

THE DARK SIDE

Shooting the left scoop (11) when not lit takes you to the Dark Side. Shooting the Dark Side 4 times awards 25 Million.

HYPERSPACE

Shooting the 3 bank Drop Targets (12), 3 times, lites the ramp (13) for Hyperspace effect awards a multiplier and awards 5 Million points. Shooting 3Bank again during Hyperspace awards another multiplier. Every 3rd time Hyperspace is enabled the Ramp (13) is lit for Super Hyperspace which awards 10 Million points.

EXTRA BALL

The Extra Ball may be lit from the Force, Jabba or ramp & collected via lane (14).

VICTORY

When player reaches the Replay Value, R2D2 (15) is lit for 25 Million & collected via lane (6).

X-WING MULTI MILLIONS

This timed feature is lit by shooting the Force scoop (11) when lit. While the timer is active shoot the X-wing Targets (3) for 1 Million points each.

JEDI RETURN

This feature is randomly lit by the Force. Jedi Return arrows (16) lite for 10 Million per shot on a timer.

R2D2 Runaway

Shooting Lane (10) lites a C3PO eye(24). When both eyes are completed, lamp (25) is lit for the R2D2 Runaway initiating a Countdown Bonus of 15 Million points. Shooting the ball via lane (6) to R2D2 (15) collects the points remaining in the Countdown Bonus.

Super R2D2

This feature is randomly lit by the Force. The countdown bonus starts with 50 Million points. Shooting the ball via lane (6) to R2D2 (15) collects the points remaining in the Countdown Bonus.

MASTER YODA

Master Yoda is lit by the Force & Hyperspace.Shoot Lane (10) when lamp (20) is lit to start the feature.

Yoda will appear on the Display and the player may then select one of two features displayed on the Dot Matrix using the flipper buttons.

Death Star TRI-BALL

Shoot the Death Star target (21) to advance the Yavin Moons (22). When all the Moons are completed, the Death Star target will drop down providing access to the Death Star(23).

Shooting the ball into this opening will start Auto - 3 Ball.

Jackpot

In TRI-BALL, shoot the Death Star Target (21) one time, to light the Jackpot on the ramp (13). Each hit to the target (21) increases the Jackpot value. Completing the ramp (13) awards the Jackpot Value.

The Jackpot can be re-lit after Double Jackpot (see Below) by shooting target (21) twice.

Double Jackpot

After the Jackpot is collected the Death Star target (21) will drop and the double Jackpot timer will start. Shooting the ball into the Death Star (23) before the timer elapses will award the Double Jackpot.

Skill TRI-BALL

Shooting the Death Star Target (21) advances the Yavin Moons (22). When the 5th moon is lit the player can push the Shifter handle (2) in the down position and press the Fire button (1) to drop the Death Star Target (21). When the target is operated by this method, the player must shoot the ball into the Death Star (23) before the countdown timer runs out, to initiate TRI-BALL.

If the timer runs out before the shot is completed the target returns to its original position blocking access to the Death Star.

AUDIT FUNCTIONS

GENERAL

There are 85 audit functions provided for accounting purposes and for evaluation of game difficulty adjustments. Audit functions are split into two groups. There are nine most-used audits (1 through 9) in a 'quick look' group and 75 less-used audits (11 through 85), in an 'expanded' group. The various auditing functions are summarized in the **AUDITING FEATURES TABLE** and, when accessed, are shown on the player score displays. The *Audit Number* is shown in the top of the display, the *Description* is shown next and the *Audit Total* in the display. bottom Access and control is provided from switches located on the inside of the coin door.

To access audit functions, open the coin door and make sure that the FORWARD/REVERSE switch is in the FORWARD (up) position. Depress the STEP switch and the display indicates AUDITS & ADJUSTMENTS. This indicates access to audit functions.

With the FORWARD/REVERSE push-button switch still in the FORWARD (up) position, depressing the STEP push-button switch advances through the audit functions one at a time. To review lower-numbered functions, set the forward/reverse push-button switch to the REVERSE (down) position and operate the STEP push-button switch.

To access expanded audits, operate the step push-button until AUDIT 10, EXPAND AUDITS is displayed. Set the choice to YES as indicated in the lower display by depressing the Game Start push-button and then depress the step push-button. The request is installed and Audit 11 is displayed. When you exit audits and adjustments, the Audit 10 setting is returned to off for the next time that a review of audits are required.

Audit totals may be reset to zero using Game Adjustment **ADJUSTMENT 11, AUDITS RESET**. Game adjustments (1 to 13 and 14 to 49) begin after the last audit function (10 or 85). Once audits functions have been recorded, and if no adjustments are required, you may return the game to the attract mode. If adjustments are required, continue pressing the STEP button until the game adjustments are reached. See Game Adjustments for details.

'QUICK LOOK' FUNCTIONS

Total Paid Credits (AUDIT 1) - the total number of paid credits is displayed.

Free Percent (AUDIT 2) is Free Total (E AUDIT 24) divided by Plays Total (E AUDIT 25).

Ball Time Average (In seconds) (AUDIT 3) is Total Play Time divided by Total Balls Played (AUDIT10) .

Average Game Time (AUDIT 4) is the Average Game Time expressed in minutes and seconds.

Coins (AUDIT 5, 6, 7 and 8) - These four audit totals are provided to show the amount of coins registered for the left, right, center, and 4th coin chutes, respectively.

Total Coins (AUDIT 9) is the total number of coins dropped through all 4 coin chutes.

Expand Audits (AUDIT 10) permits viewing of expanded audits.

EXPANDED FUNCTIONS

Balls Total (Audit 11) is the total of regular and extra balls.

Extra Balls Total (Audit 12) is the total number of extra balls awarded.

Extra Ball Percentage (Audit 13) is Audit 12 divided by Plays Total (Audit 26).

Replay Awards (Audit 14 through 17) provide the total awards (credit, extra ball, or audit) for replay levels 1 through 4, respectively.

Total Replays (Audit 18) is the total awards (credits, extra balls, or audit only) for exceeding replay score levels.

Replay Percentage (Audit 19) is the Replay Total awards for exceeding replay score levels (Audit 18) divided by Plays Total (Audit 26).

Total Specials (Audit 20) is the total awards (credits, extra balls, or scores) for making specials.

Special Percentage (Audit 21) is Special Total (Audit 20) divided by Plays total (Audit 26).

Total Matches (Audit 22) is the total credits awarded for matching the last two digits of the score with the system-generated Match Number at the end of the game. Percentage of match credits will be adjustable from 0% to 10%, by Adj. 14 if enabled.

High Score Wins (Audit 23) is the total credits awarded for exceeding the high-score-to-date scores.

High Score Percentage (Audit 24) is High Score Wins (Audit 23) divided by Plays Total (Audit 26).

Total Free Plays (Audit 25) is the total free credits for replays, high-score-to-date, specials, and match.

Total Games (Audit 26) is the sum of Total Paid Credits (Audit 1) and Free Total (Audit 25). Note that free credits are not recorded in the Audit until they are actually used.

0.0 - 9.9 Million (Audit 27) provides the total number of games the Player's final score was between 0 and 9,999,990 points.

10.0 - 24.9 Million (Audit 28) provides the total number of games the Player's final score was between 10,000,000 and 24,999,990 points.

25.0 - 49.9 Million (Audit 29) provides the total number of games the Player's final score was between 25,000,000 and 49,999,990 points.

50.0 - 74.9 Million (Audit 30) provides the total number of games the Player's final score was between 50,000,000 and 74,999,990 points.

75.0 - 99.9 Million (Audit 31) provides the total number of games the Player's final score was between 75,000,000 and 99,999,990 points.

Over 100 Million (Audit 32) provides the total number of games the Player's final score was over 100,000,000 points.

Average Scores (Audit 33) provides the Average Score by adding the Final Score of each game to a table and dividing this sum by the Total Plays .

Games - Player (Audit 34 through 37) provide individual totals of 1- player, 2-player, 3-player, and 4-player games, respectively.

Attract Minutes (Audit 38) provides the number of minutes the game is in Attract Mode (Factory use).

Cycles High Score Reset (Audit 39) provides the number of times that the high score levels have been automatically reset (if enabled).

Coin No Credit (Audit 40) provides the number of times the coin switch was closed without awarding credit(s)-This option is used in multiple coin conditions.(ie. 2 quarters 1 Play)

Service Credits (Audit 41) provides the total number of Service credits added to the game. *See Game Diagnostics on page 19 for instructions regarding entry of Service Credits.*

Proprietary (Audit 42 - Audit 45) provide information to the game designer to aid in design development. (Factory use only.)

Total Buyin Games (Audit 46) provides the number of times a player utilized the Buy In Feature. (See E Ad 40)

Drains Left (Audit 47) provides the number of times the ball drained out the left drain.

Drains Center (Audit 48) provides the number of times the ball drained out the center drain.

Drains Right (Audit 49) provides the number of times the ball drained out the right drain.

GAME SPECIFIC FUNCTIONS

Extra Ball Lit From Ramp (Audit 50) provides the total number of times the Ramp lit the Extra Ball light.

Extra Ball Lit From Force (Audit 51) provides the total number of times the Force lit the Extra Ball light.

2X Made (Audit 52) provides the number of times 2X bonus was enabled.

4X Made (Audit 53) provides the number of times 4X bonus was enabled.

6X Made (Audit 54) provides the number of times 6X bonus was enabled.

8X Made (Audit 55) provides the number of times 8X bonus was enabled.

of Bonus Holds (Audit 56) provides the number of times Bonus Hold was enabled.

Yoda ExBall (Audit 57) provides the number of times the Yoda feature lit the Extra Ball light.

Laser Kick Used (Audit 58) provides the number of times the Laser Kick returned a ball into play.

Freeze Used (Audit 59) provides the number of times the Freeze Feature was enabled.

TRI-BALL Lit (Audit 60) provides the number of times the TRI-BALL Feature was lit.

TRI-BALL Award (Audit 61) provides the number of times the TRI-BALL Feature was awarded.

Rerace Award (Audit 62) provides the number of times the Rerace Feature was awarded.

Jackpot Lit (Audit 63) provides the number of times the Jackpot Feature was lit.

1 Jackpot Award (Audit 64) provides the number of times 1 Jackpot were awarded.

2 Jackpot Award (Audit 65) provides the number of times 2 Jackpots were awarded.

3 Jackpot Award (Audit 66) provides the number of times 3 Jackpots were awarded.

4 or More Jackpots (Audit 67) provides the number of times 4 Jackpots or more were awarded.

Star Wars Completed (Audit 68) provides the number of times, all the letters were completed in STAR WARS.

Timer Double Jackpot (Audit 69) provides the number of times the Timer Double Jackpot was awarded.

Hyperspace Award (Audit 70) provides the number of times the Hyperspace feature was awarded.

Yoda Lit (Audit 71) provides the number of times the Yoda feature was lit.

Yoda Award (Audit 72) provides the number of times the Yoda feature was awarded.

Dark Side (Audit 73) provides the number of times the Dark Side Feature was awarded.

25M Dark Side (Audit 74) provides the number of times the Dark Side Feature awarded 25 Million points.

Cantina (Audit 75) provides the number of times the Cantina Feature was awarded.

Force Award (Audit 76) provides the number of times the Force awarded one of the features on the display.

Force Completed (Audit 77) provides the number of times the Force completed all of the features on the display.

R2D2 Runaway Award (Audit 78) provides the number of times the R2D2Runaway Feature was awarded

Max # of Ramps (Audit 79) provides the maximum number of Ramps completed in a single game.

Left Orbits (Audit 80) provides the total number of left orbits completed.

Right Orbits (Audit 81) provides the total number of right orbits completed.

Jabba Award (Audit 82) provides the number of times the Jabba feature was awarded.

Sarlacc Award (Audit 83) provides the number of times the Sarlacc feature was awarded.

Victory Ramps Awarded (Audit 84) provides the number of times the Victory Ramp was Awarded.

Meter Clicks (Audit 85) provides the total number of money clicks accumulated, based on the country's lowest coin denomination used on the front door.

GAME ADJUSTMENTS

GENERAL

There are 49 adjustable functions provided to vary difficulty of play and to periodically reset audits and the high score levels. The various game adjustments are summarized in the **Game Adjustments Table** and, when accessed, are shown on the player score displays. The *Adjustment Number* is shown in the top of the display, the *Description* is shown next, and the setting, in the bottom of the display. Access and control is provided from switches located on the inside of the coin door.

Game adjustments are accessed from the audit mode. With the audits displaying AUDIT 1 and the FORWARD/REVERSE switch in the REVERSE (down) position, depress the STEP switch and ADJUSTMENT49 is shown at the top of the display, FACTORY RESTORE is shown in the middle of the display, and NO is shown in the bottom of the display. With the audits displaying AUDIT 10 or 85 and the FORWARD/REVERSE switch in the FORWARD (up) position, depress the STEP switch and ADJUSTMENT 1 is shown in the top of the display, REPLAY/MANUAL is shown in the middle of the display, and the setting is shown in the bottom of the display.

With the FORWARD/REVERSE switch in the FORWARD (up) position, depressing the STEP switch advances through the game adjustments one at a time. With it in the REVERSE (down) position, the STEP switch selects lower-numbered adjustments. To rapidly scroll through adjustments, hold the STEP switch depressed. Adjustment values are changed by operating the GAME START push-button. The FORWARD/REVERSE switch setting determines whether the values are increased or decreased. (With the FORWARD/REVERSE switch up, the value increases, with it down, the value decreases). When the STEP switch is depressed the display indicates REQUEST INSTALLED.

REPLAY AND GENERIC FEATURES

Replays may be adjusted either for fixed levels or for a system-adjusted manual percentage of replay awards. Four levels may be selected. Adjustments allow awarding of a credit or an extra ball as each level is exceeded. With the manual percentage feature, if the actual replay percentage is higher or lower than that desired, the game computes new recommended manual percentage score(s). When the coin door is subsequently opened the player displays indicate the recommended level and a sound is made to alert the operator of a potential change. This new level is entered into adjustments simply by pressing the game start push-button. (If the coin door is closed or you enter audits/adjustments or diagnostics, the replay level is not changed.)

REPLAYS (Adjustment 1 through 6)

ADJ.1 Replay Manual/Fixed

- **Manual:** Adjust for percentage of awards for replay levels (1% through 50%). Proceed to ADJ.02 and 03 for starting replay levels.
- **Fixed:** Lower the automatic value below 1% and Player 1 display indicates FIXED. Proceed to ADJ. 2 and 3 for fixed replay levels.

ADJ. 2 Start Replay

- **Manual:** Adjust the starting Replay 1 setting to between 20,000,000 and 9,999,000,000.

ADJ. 3 Levels Replay/Level 1,2,3 & 4 Replay

- Adjust the number of replay levels to be active (1 to 4). Any additional starting replay levels are automatically set to values higher than Replay 1
- Adjust Replay 1 level to between 20,000,000 and 9,999,000,000. (Same as Start Replay)
If ADJ. 3 is set for 2, adjust Replay 2 level to between 20,000,000 and 9,999,000,000.
If ADJ. 3 is set for 3, adjust Replay 3 level to between 20,000,000 and 9,999,000,000.
If ADJ. 3 is set for 4, adjust Replay 4 level to between 20,000,000 and 9,999,000,000.

* Some settings result in Drop-Down Tables- See Text

Adj. 4 Game Awards - Set for replays to award: **CREDIT, EXTRA BALL, NONE** or **SPECIAL** (when score threshold is achieved a playfield special is lit).

Adj. 5 Limit FreeGame - Adjust for the maximum number of free games that may be accumulated per game; 0 to 9 .

Adj. 6 Limit Extra Balls - Adjust for the maximum number of extra balls that may be accumulated per game; 1 to 9 or OFF.

SINGLE-FUNCTION DIFFICULTY ADJUSTMENT (Adj. 7)

Any one of five **INSTALL** settings for this adjustment may be activated to automatically select settings for multiple adjustments affecting game difficulty. Use the **Start** button to choose the difficulty level you require and press the **step** button to activate the setting. After activation, the individual adjustments may be readjusted if desired. Refer to **Install Adjustment Table** for details.

Adj. 07 Game Rules - Set to **EXTRA EASY, EASY, FACTORY, HARD** or **EXTRA HARD**.

(Note - Additional game features not variable by the Expanded Adjustments may also change using this setting.)

Install Adjustment	Adj. 7 Extra Easy	Adj. 7 Easy	Adj. 7 Factory	Adj. 7 Hard	Adj. 7 Extra Hard
Adj.45 Save Ramp Ex.Balls	YES	YES	YES	NO	NO

NOVELTY / 5-BALL/ADD-A-BALL SETTINGS

The following three combinations are recommended for situations where local laws restrict certain game features regarding the use of replays or the number of balls per game:

Novelty Play Rules - Set to establish recommended settings for no free play or extra balls:

Adj. 1 Manual Replay = Fixed
Adj. 2 Start Replay = 00
Adj. 3 Levels Replay = None
Adj. 4 Game Awards = None
Adj. 5 Limit Freegame =0

Adj. 6 Limit Extra Balls = 0
Adj. 14 Match Percent = Off
Adj. 20 World Record Awards=0
Adj. 21-23 Todays 1-3 Awards= 0

5-Ball Play Rules - Set to establish recommended settings for 5-ball play:

Adj. 1 Manual Replay =07%
Adj. 2 Replay Start = 145,000,000
Adj. 3 Replay Levels = 01
Adj. 4 Game Awards = Credit
Adj. 5 Limit Freegame =3
Adj. 6 Limit Extra Balls = 3

Adj. 14 Match Percent = 04
Adj. 15 Balls/Game =5
Adj. 20 World Record Awards = 3
Adj. 21 Todays 1 Award= 1
Adj. 45 Save Ramp Ex.balls =No
Adj. 46 Spot D.S. Moons =Factory

Adj. 47 Rerace Criterion =Hard

Extra Ball Settings-To disable awarding of credits and provide awards with an extra ball make the following adjustments:

Adj. 4 Game Awards = Extra Ball
Adj. 5 Limit Freegame = 0
Adj. 14 Match Percent = OFF

Adj. 19 Scores Highest = No
Adj. 20 to 23 World Record & Todays High Awards= 0

GAME PRICING (Adj. 8)

There are two methods available for coin switch programming; Standard and Custom. Standard pricing uses a single adjustment (Adj. 8) to select a pricing scheme shown in the **Standard /CustomPricing Table**. Custom pricing is used to select additional pricing schemes defined by a Drop Down menu .

With Adj. 8 set to **CUSTOM** operating the step button again initiates a drop down menu representing coin switch pulses for the left, right, and center coin slots. The prescribes the number of pulses required for one credit. For example, if *Left Coin Pulses*, was set to 02 and *Coin Switch Pulses Required for 1 Credit*, to 01 a coin in the left slot would produce two credits. Further, if *Left Coin Pulses*, was set to 01 and *Coin Switch Pulses Required for 1 Credit*, to 02, two coins in the left slot would be required for one credit.

Coin Switch Pulses Required for Bonus Credit may be set to post bonus credits when a minimum amount of coins are inserted at one time. For example, if *Left Coin Pulses* was set to 01, *Coin Switch Pulses Required for 1 Credit* to 01 and *Coin Switch Pulses Required for Bonus Credit* to 04, one credit would be posted for each of the first three coins in the left slot and two credits for the fourth coin.

Standard/Custom Pricing - Set for the desired pricing scheme from the Standard Pricing Table as indicated in the Player 1 and 2 displays. For Custom Pricing, set to **CUSTOM**. When set to **CUSTOM**, the following adjustments are utilized to tailor each individual coin chute.

Left Coin Switch Pulses - Set the number of pulses registered for closure of the left coin switch; 00 to 99.

Right Coin Switch Pulses - Set the number of pulses registered for closure of the right coin switch; 00 to 99.

Center Coin Switch Pulses - Set the number of pulses registered for closure of the center coin switch; 00 to 99.

Coin Switch Pulses Required for 1 Credit - Set the number of coin switch pulses required to post one credit; 00 to 99.

Coin Switch Pulses Required for Bonus Credit - Set the number of coin switch pulses required to award a bonus credit; 00 to 99.

ADDITIONAL GENERIC FEATURES

Adj. 9 Game Cleaned - When enabled (set to YES) the game cleaning counter will be reset to zero and Game Clean-Me message in Tech Alert will go out when STEP is depressed.(Also see Adj.31.)

Adj. 10 Coin Reset - When enabled (set to YES) all coin and paid credit totals will be reset to zero when STEP is depressed.

Adj. 11 Audits Reset - When enabled (set to YES) all audit totals except for coins and paid credits will be reset to zero when STEP is depressed.

Adj. 12 Restore High Score - When enabled (set to YES) the High Score Levels and associated initials will be restored to backup settings when STEP is depressed .

Adj. 13 Expand Adjustments - When set to NO, depressing the STEP push-button advances directly to Adj. 46, FACTORY RESTORE. When set to YES, depressing the STEP push-button sequences through the expanded adjustments. When exiting from expanded adjustments, this function is reset to OFF for the next time that adjustments are required.

Adj. 14 Match Percent- Set Match percent from 00% to 10% or OFF. At 00% the match display occurs at the end of the game but never awards a credit.

Adj. 15 Balls Per Game - Adjust the number of balls per game; 2 to 5.

Adj. 16 Tilt Warnings - Adjust the number of plumb bob tilt switch closures before the ball in play is tilted; 1 to 3 or OFF.

Adj. 17 Replay Boost - Set to YES or NO. When set to YES, exceeding a replay will set a temporary replay level for each time a replay level is surpassed. This new level will equal the player's final score (when the replay was awarded) for each following game, until the replays have all been played. At this time the previous level is resumed.

Adj. 18 Credits Limit - Adjust the maximum number of credits that may be posted; 4 to 50.

HIGH SCORE LEVELS (Adj. 19 through 30)

There are four of the six high score levels with associated player initials that are displayed during the attract mode. This provides a high-score-to-date feature. When players exceed these levels, the player initials may be entered to replace the previous ones. These levels may be adjusted to award credits and to be reset to backup values after a selected number of games.

Adj. 19 Hiscres Allowed - Set to enable or disable the four high score levels; YES or NO.

Adj. 20 World Record - Adjust the number of credits awarded for exceeding level 1 (the highest of the four levels); 0 to 5.

Adj. 21 Highscore 2 Award- Adjust the number of credits awarded for exceeding level 1; 0 to 3.

Adj. 22 Highscore 3 Award - Adjust the number of credits awarded for exceeding level 2; 0 to 2.

Adj. 23 Highscore 4 Award - Adjust the number of credits awarded for exceeding level 3; 0 to 1.

Adj. 24 Backup World Record - Adjust the score level to which the world record (the highest of the four levels) may be altered. This adjustment is not affected by Adj.30 (Factory Reset defaults to 7,500,000).

Adj. 25 Backup Highscore 2 - Adjust the backup score level to which level 1 may be reset.

Adj. 26 Backup Highscore 3- Adjust the backup score level to which level 2 may be reset.

Adj. 27 Backup Highscore 4- Adjust the backup score level to which level 3 may be reset.

Adj. 28 Backup Highscore 5- Adjust the backup score level to which level 4 may be reset.

Adj. 29 Backup Highscore 6- Adjust the backup score level to which level 5 may be reset.

Adj. 30 High Score Reset Every - Adjust the number of games between automatic resets of high score levels to backup settings and ball time averager adjustments; 100 to 900 or OFF (no reset or adjustment).

Adj. 31 Clean Game Every- Adjust the number of games in which the Clean Game message appears in Tech Alert to indicate the playfield needs cleaning. Adjustable from 100 to 2000.

Adj. 32 Free Play - When set to YES, no coins are required for games.

Adj. 33 Custom Message - When desired, this function is used to establish a custom message periodically displayed during the attract mode. Set the feature to **CHANGE** using the Credit button and depress STEP. The letter **A** is indicated in the first position of the Player 1 display. Vary the letter by operating the left and right flippers. With the desired letter indicated, depress the CREDIT button to lock in the letter and advance to the next display character. Repeat this procedure until the desired message is indicated in the Player 1 and 2 displays. At this time, depress the STEP push-button switch to advance to Adj. 34.

Adj. 34 Attract Mode Music - Set to ON (approximately every 3 minutes), or OFF.

Adj. 35 Flash Lamps- Set to NORMAL, DIM or OFF. When set to NORMAL the Flash Lamps are active, when DIM the Flash Lamps impulse power is reduced by 25% and when OFF the Flash Lamps do not flash.

Adj. 36 Coils Pulse- Set To NORMAL, HARD or SOFT. When HARD the coil pulse power is increased by 12.5% of the normal pulse rate. When set to SOFT the coil pulse power is reduced by 12.5% of the normal pulse rate. These adjustments are provided to compensate for Low Line or High Line voltage conditions where the solenoids appear to kicking too weak or too hard.

Adj. 37 Level Adjust by - When set to OPERATOR, the Manual Percentage Replay Adjustment can only be altered with the front door open (see manual page 3). When set to ANY, the Manual Percentage Replay Adjustment will display the message "PRESS START TO CHANGE REPLAY LEVEL" on power up if a change is recommended, and anyone operating the replay button will initiate the change to the replay score.

Adj. 38 Install Country- Set to USA, GERMAN, FRENCH, AUSTRIA, BELGIUM, SWISS or CANADA. Determines the default settings for the respective country for game pricing etc.

Adj. 49 Factory Restore-Depressing STEP without changing the value shown in the Player 4 Display locks in any custom message set with Adj.33 and returns the game to GameOver. Set the value to ON and depress STEP switch to revert all game adjustments to factory settings, clear the Custom Message and return to Game Over.

GAME SPECIFIC FEATURES (Adj. 39 TO Adj. 48)

Adj. 39 Next Game Promo- Set to ON or OFF. When set to ON, the game, in attract mode will randomly display a short promotion for our next game. When set to OFF, the game in attract mode will not generate any sounds or graphics refering to the next game.

Adj. 40 Buy in Enabled - Set to YES or NO. When set to YES, the game will display a countdown timer at the end of each game allowing the player to "Buy in" most of the features accumulated during the previous game. When set to NO, none of the previous game features will be retained and no countdown timer will appear.

Adj. 41 Game Restart -Set to YES or NO. When set to YES, a new game may be started during any ball after the first ball is completed. (Note-Pressing start during the first ball will add additional players.) When set to NO, The game disables the start button after the first ball until the final ball is in play.

Adj. 42 Extra Ball Percentage -Set from 0 to 50. Allows the operator to adjust how frequently the Extra Ball feature is made available to the player.

Adj. 43 Background Volume - Set to 0, 25, 50, 75 or 100 percent. Allows the operator to adjust the background music volume independantly from the normal game sounds.

Adj. 44 Bill Validator - Set to YES or NO. When set to YES, the display, in game attract mode, will show an "Insert Bill Animation". When set to NO, the display, in game attract mode will show "Insert Coin Animation".

Adj. 45 Save Ramp Ex.balls - Set to YES or NO. When set to YES, the number of ramps completed will be retained in memory from ball to ball for the same player. When set to NO, the number of ramps completed will be reset with each new ball in play.

Adj. 46 Spot D.S. Moons -Set to EXEASY,EASY,FACTORY, HARD or EXHARD.Determines how the Death Star Moons will be spotted at the begining of each ball.

EXEASY	EASY	FACTORY	HARD	EXHARD
Always 2	Always 1	1 Before TRI-BALL	1 Before Jackpot	Never

Adj. 47 Rerace Criterion -Set to EXEASY,EASY,FACTORY, HARD or EXHARD. Determines during TRI-BALL, when a drained ball will be kicked back into play.

EXEASY	EASY	FACTORY	HARD	EXHARD
If no Jackpot was completed <u>or</u> TRI-BALL time is low.	If no Jackpot was completed	If TRI-BALL time is low.	If no Jackpot was completed <u>and</u> TRI-BALL time is low.	Never

Adj. 48 Proprietary

GAME DIAGNOSTICS

The Data East Pinball system provides tests for sounds, digital displays, lamps, switches, and solenoids. Each feature may be tested manually or automatically using the STEP and FORWARD/REVERSE push-button switches inside the coin door and the Game Start push-button switch on the front of the cabinet. The automatic tests may be used for a quick verification of automatic test functions and the manual tests, for troubleshooting.

During game play, activation of switches and operation of coils with associated switches are monitored. If a switch is not made for 50 games it is considered bad. When operation of a coil should close or open a switch and does not, the coil is considered bad. In Game over attract mode, bad switches and coils (if any) are reported (See Tech Alert Description below). Note that reporting of an unused switch does not constitute a problem and that a bad coil could mean that the associated switch requires adjustment.

Wiring to switches, solenoids and controlled lamps uses color-coded wires that basically follows a resistor color-code scheme for the eight rows and eight columns. During the switch tests and during the discrete lamp test, identification of the color of the row and column wires are indicated in the Player 3 & 4 Displays. For example, making the right coin switch during the Switch Test results in the switch functional name (RIGHT COIN) shown in the Player 1 and 2 Displays, the row (WHT-YEL) and column (GRN-BRN) wire color codes shown in the Player 3 display, and the switch number shown in the Player 4 display.

BLK=Black
BRN=Brown
RED=Red
ORN=Orange
YEL=Yellow

GRN=Green
BLU=Blue
VIO=Violet
GRY=Grey
WHT=White

ENTERING DIAGNOSTICS

With the game in the game-over mode, open the coin door and make sure that the FORWARD/REVERSE push-button switch is set to REVERSE (down) and depress the STEP push-button switch. The Player displays will show the tollfree Customer Service number 1-800-KICKERS, that is 1-800-542-5377 (U.S. including Illinois) and the toll number (708) 345-7700 (Outside the United States). this indicates entry into game diagnostics.

Service Credits

With the phone number displayed depress the STEP push-button switch. The game now gives the technician the option of adding 1 to 5 service credits. These credits allow the technician to test-play the game without adding any counts to the coin audits (AU 01 & AU 05-AU 08). When the message appears, press and hold the Game Start pushbutton until the desired number of credits are shown on the display. Then press the step button again to add these credits to the game and enter Tech Alert. If no Service Credits are desired, press the step button with the initial message displayed.

Tech Alert

The player displays will now indicate if there are any Bad Switches (Switches that are closed, that should not be or switches that have not been activated in 50 games) it also indicates if the game requires cleaning, based on the number set in E Ad 31.

Burn-In Minutes

Pressing the step button while in Tech Alert mode will step game into Burn-in Mode(Factory use). At this stage pressing the game start button will cause the game to exercise all CPU I/O functions. This is provided to constantly exercise sounds, solenoids, etc...

To stop the test press the start button again. Cumulative Burn-In minutes will be displayed. To reset Burn-In minutes to 00, you must perform a Audit Reset Adj. 11 or a Factory Restore E Ad 49.

SOUND TESTS

The Data East Pinball sound system produces true digital stereo sound on left and right speakers and mono on a center speaker. During Sound tests, the bottom display shows the sound board circuit under test and the corresponding sounds are selected by operating the left and right flipper buttons to choose the circuit to be tested. Now press the start button to initiate the sound. Refer to the Sound Test Chart for the sound circuits displayed and the sounds produced.

The sound functions allow verification that all channels are functioning properly and that the speaker connections are correct. Speaker Phase Testing procedures follow for checking speaker connections.

SOUND TEST CHART

Auto/Manual Tests (Player 1 & 2)	Sounds Produced
LEFT SPEAKER CENTER SPEAKER RIGHT SPEAKER VOICE ROM1 (Loc U17) VOICE ROM2 (Loc U21) MUSIC TEST (Sound ROM Loc U7)	Left Sine (Left Speaker Only) Center Sine (All speakers) Right Sine (Right Speaker Only) "I got him!" "Concentrate!" Level 1 Through Level 3 Music

Speaker Phase Testing

Connections to each of the three speakers are polarized and each must be connected appropriately for the best quality sound. If one speaker has the positive and negative connections reversed with respect to the other two, bass frequencies will not be produced properly and the overall sound quality will be poor.

To test for proper speaker phasing, use the sound test to cycle through the Left, Center, and Right Sine functions. If the Center Sine produces more volume and bass than the Left and Right Sines, the speakers are connected properly. If it produces the same or less, one speaker is connected improperly. To isolate and correct reversed speaker connections, one of two methods may be used.

1. Check each speaker for polarity markings. If the speakers have polarity markings, verify that the single-color wire (BLK, YEL or RED) is connected to the negative (-) terminal.
2. Disconnect the speaker output connector from the Sound Board and connect a 1.5-volt battery across each speaker pair one at a time while observing the speakers. Make sure that the positive battery terminal is connected to the positive lead (CN1-pin 1, 3, or 6) each time. As the connection is made, check speaker cone movement; proper connections are indicated by outward movement.

DIGITAL DISPLAY TEST

The Digital display utilizes a Dot Matrix Display Control board mounted in piggyback fashion to the display driver Board. The purpose behind this board is to provide more information (32 X 128 Dots) to the operator as well as displaying graphics to the player.

The board is controlled by a 68B09E microprocessor and it's personality ROMs (Unique to the Game) . It receives Data, Reset & Clock information from the CPU Board via the ribbon cable and sends back multiple Status and Busy signals to the CPU . This is to insure synchronized communication between the CPU and the Display Controller board.

The Drivers for the rows and columns are provided on 4 surface mounted integrated circuits on the Display driver board.

Automatic Test

To enter Display tests, operate the STEP push-button switch from the Sound Manual test. The displays will first illuminate one vertical column of dots in the Display. After a slight delay it will cycle one column from left to right. After a period of time, it will begin the Row test by lighting the top row of the display, then turning it off and illuminating the next row, until each row has been individually lit, while the other rows are off. The test will then turn all the dots in the display on except for one column. It will then cycle this blank column from left to right. After a period of time, it will begin the second Row test by blanking the top row of the display, then turning it on and blanking the next row, until each row has been individually blanked, while the other rows are on. The next test begins with every other dot lit, in both the rows and columns. These dots then go out, and the unlit dots light, resulting in an alternating checkerboard pattern. The test will then repeat these cycles again until advanced to the next test or until the power is removed. (Please Note- these tests may be interrupted at any time by operating the STEP push-button switch to advance to the next test.)

Bar Motor Test

This Game has a feature which lowers a Target Switch (Death Star Entry) to allow a shot to the VUK below the playfield. The motor on this mechanism is controlled by a relay driven by Q27 on the CPU and there are 2 Limit switches (Bar Motor Up & Bar Motor Down) used by the CPU to determine the status of the Bar Motor.

After entering this test, press and hold the game's Start Button. This will cause the relay to energize as long as the Button is depressed. At the same time you will notice that the switch status (ON & OFF) will be indicated in both the upper and lower portions of the display (Bar Motor Up & Bar Motor Down). The appropriate switch should be closed just prior to the limit of the Bar Motor mechanism and both switches should not be closed (ON) at the same time.

This test is located before the Switch Tests so the technician can move the mechanism until both switches read OFF. This will help eliminate erroneous readings while trying to trace a problem during Active Switch Test.

Laser Kick Test

This test provided to insure proper interaction between certain switches and their associated solenoids without entering game play. For example, by rolling the ball over the left outlane switch the Laser Kick should fire. If it kicks too early or too late, the switch actuator should be adjusted to compensate for this error. If it fails to fire, use the switch test or coil test to help determine the the cause of failure. Note: During this function, similar tests may be performed on Vertical Up Kickers or Saucers in the game.

Switches

Switches are configured in an 8 x 8 matrix of columns (switch drives) and rows (switch returns) with up to 64 switches possible. The switch tests include three parts; switch test, active switches, and bad switches. Row and column wire colors are indicated in each test using corresponding resistor color code numbers.

Switch Test

From the Laser Kick test, operate STEP push-button switch. Player 1 and 2 displays indicate SWITCH TEST. Close each switch and observe the displays. The Player 1 and 2 displays will indicate the switch name, the Player 3 display indicates the row and column wire colors, and the Player 4 display indicates the switch number. When a switch is released, the name and number disappear until another switch is closed or the test is exited.

Active Switches

Operate the STEP push-button switch from the Switch Test. Player 1 and 2 Displays indicate ACTIVE SWITCHES. If any switches are stuck closed (or made from the presence of a ball), the Player 1 and 2 displays sequence through switch names, the Player 3 display indicates the row and column wire colors, and the switch numbers are indicated in the Player 4 display. This cycle continues until all switches are cleared or until the STEP push-button switch is depressed.

LAMP TESTS

Controlled lamps are configured in an 8 x 8 matrix of columns (lamp drives) and rows (lamp returns) with up to 64 lamps possible. The lamp tests include four parts, all lamps, lamp return (row), lamp drive (column), and discrete (individual) lamps. Row and column wire colors are indicated in the discrete lamp test using corresponding resistor color code numbers.

All Lamps

From the Active Switch test, operate the STEP push-button switch. Player 1 and 2 displays indicate ALL LAMPS and all controlled lamps will light.

Lamp Returns

From the ALL LAMPS test, depress the STEP push-button switch. The top display indicates LAMP RETURNS and the Bottom display indicates wire color and the LAMP RETURN driver transistor. All controlled lamps in row 1 should be lit. Operating the Game Start push-button switch cycles through each of the rows separately.

Lamp Drives

From the LAMP RETURNS test, depress the STEP push-button switch. The Top display indicates LAMP COLUMNS and the bottom display indicates wire color and the LAMP DRIVES driver transistor. All controlled lamps in column 1 should be lit. Operating the Game Start push-button switch, cycles through each of the columns separately.

SingleLamp

From the LAMP DRIVES test, depress the STEP push-button switch. The top display indicates lamp name. The bottom display indicates the row and column wire colors and the lamp matrix number. Lamp 01 should light. With the FORWARD/REVERSE push-button switch in the FORWARD (up) position, operating the Game Start push-button switch selects higher-numbered lamps; with it in the REVERSE (down) position, Game Start selects lower-numbered lamps.

FLASH LAMP COIL TESTS

Twenty-Two regular (pulsed under microprocessor control) coil drivers are provided to switch ground to coils. The Left/Right relay is used in conjunction with drives 1 through 8 to switch +32 volts between coils or flash lamps; these sets are termed "left" and "right". This relay is located on the PPB board which provides isolation diodes and current limiting resistors. This effectively provides 29 regular coils.

Flash Lamp

From the Single Lamp test, depress the STEP push-button switch. All Flash lamps will fire randomly. This allows the Technician to easily spot any burned out bulbs and replace them without stepping through the tests below.

Automatic Test

From the Flash Lamps test, depress the STEP push-button switch. Player 1 and 2 displays indicate ALL COILS. The test pulses each regular solenoid or flash lamp sequentially with the coil/flash lamp name indicated in the Player 1 and 2 displays and the wire colors in the Player 3 and 4 displays.

Select Coil

From the Coil Test, depress the STEP push-button switch. Player 1 and 2 displays indicate SELECT COIL and then the name of 1st drive, the wire colors are indicated in the Player 3 and 4 displays. Operate either Flipper push-button switch to select the coil or flash lamp to be tested. With the desired drive number indicated in the Player 4 display, depress the START push-button switch to cause it to be pulsed repeatedly.

RETURN TO GAME OVER

From the Select Coil test, depress the STEP push-button switch once. The game returns to the game-over mode.

Lamp Bulb Part Numbers

Item	Description	Part Number
1	#555 Bulb	165-5002-00
2	#44 Bulb	165-5000-44
3	#89 Bulb	165-5000-89
4	# 906 Bulb	165-5004-00

INSTALLATION INSTRUCTIONS

1. REMOVE SHIFTER ASSEMBLY AND HARDWARE PACKAGE FROM CARTON.
2. POSITION THE SHIFTER ASSEMBLY OVER THE CUT-OUT LOCATED AT THE UPPER RIGHT CORNER OF THE CABINET FRONT.
3. SECURE THE ASSEMBLY TO THE CABINET WITH THE (4) CARRIAGE BOLTS, (4) LOCK WASHERS (4) HEX NUTS PROVIDED. FASTEN SECURELY FROM INSIDE OF CABINET WITH INSTALLATION WRENCH SUPPLIED.
4. ATTACH 3-PIN CONNECTOR TO MATING CONNECTOR IN CABINET.

INSTALLATIONSANLEITUNGEN

1. SCHALTERAUFBAU UND PAKET MIT EINBAUZUBEHÖR AUS DEM KARTON ENTFERNEN.
2. SCHALTERAUFBAU ÜBER DEM AUSSCHNITT AN DER OBEREN RECHTEN ECKE DER GEHÄUSEVORDERSEITE ANBRINGEN.
3. DEN AUFBAU AM GEHÄUSE BEFESTIGEN UNTER BENUTZUNG DER DAFÜR VORGEGEHEHENEN (4) SCHLOSSSCHRAUBEN, (4) SICHERUNGSUNTERLEGSCHLEIBEN UND (4) SECHSKANTMUTTERN. VON DER INNENSEITE DES GEHÄUSES MIT DEM MITGELIEFERTEN INSTALLATIONSSCHLÜSSEL FEST ANZIEHEN.
- 4.3-STIFT ANSCHLUß MIT DEM ENTSPRECHENDEN ANSCHLUß IM GEHÄUSE VERBINDEN.

INSTRUCTIONS D'INSTALLATION

1. SORTEZ LE MONTAGE DU LEVIER DE CHANGEMENT ET LE PETIT MATERIEL DU CARTON.
2. PLACEZ LE MONTAGE DU LEVIER DE CHANGEMENT AU-DESSUS DE LA DECOUPE SITUÉE DANS LE COIN SUPÉRIEUR DROIT DE LA PARTIE AVANT DE L'ARMOIRE.
3. FIXEZ SOLIDEMENT LE MONTAGE A L'ARMOIRE A L'AIDE DES (4) BOULONS BRUTS A TÊTE BOMBÉE ET COLLET CARRE, DES (4) RONDELLES D'ARRÊT ET DES (4) ECROUS A 6 PANS FOURNIS. SERREZ FORTEMENT DEPUIS L'INTÉRIEUR DE L'ARMOIRE, A L'AIDE DE LA CLE FOURNIE.
4. BRANCHEZ LE CONNECTEUR A 3 BROCHES SUR LE CONNECTEUR CORRESPONDANT DANS L'ARMOIRE.

INSTRUCCIONES DE INSTALACION

1. SAQUE DE LA CAJA EL CONJUNTO DESPLAZADOR Y EL PAQUETE DE TORNILLOS.
2. COLOQUE EL CONJUNTO DESPLAZADOR SOBRE EL CORTE UBICADO EN LA ESQUINA SUPERIOR DERECHA DE LA PARTE DELANTERA DE LA CAJA.
3. SUJETE EL CONJUNTO AL ARMAZON POR MEDIO DE LOS (4) PERNOS DE CABEZA DE HONGO Y CUELLO CUADRADO, (4) ARANDELAS DE TRABA Y (4) TUERCAS DE HEXAGONALES PROPORCIONADAS. APRIETELO BIEN DESDE DENTRO DEL ARMAZON CON LA LLAVE DE INSTALACION PROVISTA.
4. ENCHUFE EL CONECTOR DE 3 CLAVIJAS AL CONECTOR CORRESPONDIENTE DEL ARMAZON.
