"ELEVATOR ACTION"™ UPRIGHT

1. GAME SET-UP

A. GAME FEATURES

TAITO AMERICA CORPORATION'S "ELEVATOR ACTION"™ upright game is housed in a compact and highly serviceable cabinet with many added features.

A larger designed cash box has been incorporated into the design of this cabinet.

By putting wheels on the cabinet, moving the game from one location to another is made much easier.

The Control Panel has a polycarbonate overlay, so cigarette marks and mars can easily be wiped clean. This overlay can be replaced if necessary.

The Marquee and Coverglass are made of fully Tempered Glass to minimize breakage.

The Back Service Door houses all the P.C. Boards for the system making servicing of the game, if needed, much easier.

Lighted instructions are provided to further enhance the game and attract players, by making the instructions easier to read.

B. INTRODUCTION

TAITO AMERICA CORPORATION'S "ELEVATOR ACTION"™ upright game is designed for one or two players.

Agent 17 (code name "Otto") is to secure the top secret documents from the security building. The enemy spies are in pursuit and their orders are to stop him at any cost. Having made it to the top of a 30 story building Agent 17 has to make his way down to the basement to get to the getaway car and save the documents. Enemy spies are everywhere and the documents are hidden behind the red doors (bonus points awarded). He has to open the door and keep moving. If either of them shoots the lights out there will be a temporary blackout. If Otto finds himself on top of the elevator the player will not be able to control the elevator. If he gets caught in the elevator he is a sitting duck and cannot duck the bullets. By using the escalator he can reach the basement quicker. Otto can defeat his enemy by jump kicking or firing at them. Help Otto to grab all the documents and escape the spies.

C. GAME INSTALLATION

TAITO AMERICA CORPORATION'S "ELEVATOR ACTION"™ upright game is shipped ready for operation, but a last visual check should be made to insure the game is in good condition. Please verify the following before turning the game on.

Check the exterior of the game for shipping damage, chips, dents, or broken parts.

- * Open the Rear Service Door and check for any interior damage.
- * Make sure there isn't any damage to the wiring.
- * Check the Printed Circuit Boards, making sure there is no damage to the components.
- * Check fuses to make sure they are firmly in their holders.
- * Check for loose foreign objects, especially metal objects which may cause electrical problems.
- * Check Plug-in Connectors making sure they are firmly in their sockets.

* Check Switches making sure they are not damaged.

The Video Monitor is properly adjusted before shipping. If there are any adjustments necessary, refer to our Video Monitor Manual (72-00025-001). This manual contains all the manufacturers recommendations for adjusting the video monitor.

POWER REQUIREMENTS

TAITO AMERICA CORPORATION'S "ELEVATOR ACTION"™ upright game is shipped ready for operation at 120VAC, 60Hz with a power consumption of approximately 250 Watts.

CAUTION

For safe operation it is recommended the cabinet be grounded. This game is equipped with a three conductor power cable. The third conductor is the ground conductor and when the cable is plugged into an appropriate receptacle the game is grounded. The offset pin on the power cable's three-prong connector is the ground connection.

LOCATION SPACE

Depth 35" (87.5cm)
Width 24" (61cm)
Height 68" (171cm)
Weight 300 lbs.
(Packaged Weight)

D. DIP SWITCH AND VOLUME CONTROL SETTINGS

DIP SWITCHES

TAITO AMERICA CORPORATION'S "ELEVATOR ACTION" game provides the following option switches. See Figure 1. These option switches can be found on the Game Board (99-AA017808).

FIGURE 1

VOLUME CONTROL SETTING

The Volume increases by turning the potentiometer as indicated in Figure 2.

VOLUME CONTROL LOCATIONS
FIGURE 2

POWER ON/OFF SWITCH

The power on/off switch is located in the front lower left hand corner of the cabinet.

2. MAINTENANCE

All games require a certain amount of maintenance to keep them in good condition. A periodic check of mechanical controls would be beneficial to guarantee your game will be profitable.

A. CLEANING

The exterior of the game, all metal parts and all plastic parts can be cleaned with a non-abrasive cleanser. Caution should be used when cleaning the plastic, a dry cloth can cause scratches and result in a foggy appearance.

B. FUSE REPLACEMENT

This game contains 8 fuses. Seven of these fuses can be found on the Power Supply Assembly, five (5) are on the PCB and two (2) are on the Power Supply Bracket. One (1) is located at the bracket where the AC line cord comes into the cabinet. See Figure for location of these fuses.

FUSE REPLACEMENT
FIGURE 3

C. VIDEO MONITOR REMOVAL

If you need to remove the Video Monitor follow the instructions listed below:

NOTICE:

"This equipment complies with the requirements of Part 15 of FCC Rules for a Class A computing Device. Operation of this equipment in a residential area may cause unacceptable interference to radio and T.V. reception requiring the operator to take whatever steps are necessary to correct the interference."

- * Disconnect the power from the line voltage.
- * Disconnect the Monitor cable connector.
- * While holding the monitor bracket take out the two rear side bolts, one on each side of the cabinet.
- * Carefully lower the monitor on to monitor stops.
- * Remove the four mounting bolts and disconnect the braided ground wire.
- * Slide the monitor out by pulling the monitor toward you.

CAUTION

Use extreme caution and do not touch electrical parts of the Monitor Yoke area with your hands or with any metal object in your hands! High voltages may exist in any Monitor, even with power disconnected.
