Failure to be properly grounded may cause failure to the P.C.B. and components.

UPGRADING AND INSTALLING TURBO EPROMS

These instructions are to be used for the installation and the removal of the original CAPCOM EPROMS from your Street Fighter II Champion "B" PCB.

1. Turn off the Power and unplug the extension cord.
2. You will need the following tools to remove and install the components from the P.C.B..
 - * Grounding strap on the personnel removing and installing the components.
 - * One Flat head screw driver or equivalent device.
 - * One Phillips head screw driver size # 2.
3. Ground yourself when removing the P.C.B. from the upright or wherever the P.C.B. is being removed.
4. Remove the PCB from the cabinet by unscrewing the four feet with the phillips screw driver. The personnel should be grounded with a strap or be in constant contact with the upright at all times.
5. Place the PCB on a flat conductive mat that is wired properly to ground.
6. Carefully remove EPROMS 21, 22, and 23 with the flat head screw driver **Figure A. DO NOT BEND THE LEGS OR SCRATCH THE PCB.** This may cause damage to the board.
7. Remove the components from the Turbo Kit and observe the polarity of the components before inserting the components into the designated sockets. For example, U21 from the kit and pin #1 will be located on the left side of the PCB. All personnel should be grounded when replacing the electronic components.
8. Install the PCB into the upright. Confirm that the game is the Turbo Version by confirming the following on the video:
 1. After the RAM check, the Street Fighter II title should appear as " Street Fighter II 2T ".
 2. Following the Warning Information, the opening demo will play showing the Street Fighter II' logo with its new colors, yellow and purple gradation. The Title screen will then appear with the sub-title, "HYPERFIGHTING", flashing underneath the SFII logo.
 3. The above information should assure that the EPROMS have been properly installed.
