THE PIT

Continuing with its policy of producing high quality video games, Centuri, Inc., adds to its successful line, THE PIT. Centuri incorporates into this game, all the elements of sight and sound necessary to attract a player of any skill level.

The game begins with an underground cave, etched in tunnelling paths, illuminating the game screen. Atop the cave surface, stands a Shelter Station. Without delay, a Base Ship lands to the left of the Station, and an Astronaut-Explorer, garbed in green, exits the Ship to begin his Mission. His goal is to retrieve the Buried Treasure, which is secure in a chamber in the cave bottom, and return to the Base Ship.

The Astronaut-Explorer is guided down through the cave with the Laser Shooting Joystick. Paths are tunneled open by him, in the direction that he is guided. Openings can be made through the solid cave wall, to open paths, as well as around the barricading rocks. The Astronaut-Explorer must be wary of the rocks loosened by the Laser gun. If he does not move clear of them, they will fall on him and crush him.

Shortly after the Astronaut-Explorer embarks on his Mission, an enemy ship lands to the right of the Shelter Station. Enemy explorers depart from their ship, and descend into the depths of the cave, in attempt to steal the Buried Treasure, while trying to plummet the Astronaut-Explorer, hoping to destroy him. The Astronaut-Explorer defends himself by firing at the enemy from a right or left direction. As quickly as one enemy is shot(200 points), another enemy enters the cave to take its place.

Along his route to the Buried Treasure, the Astronaut-Explorer's Mission is enhanced if he collects any of the Blue Gem Crystals(1,000 pts.) found in the preexisting paths.

Upon reaching the Treasure chamber, the Astronaut-Explorer must cross the entrance at his own risk. He must quickly procure the Treasure(2,000 points), and exit the chamber, before the ceiling of rocks tumble down upon him, and destroy him.

After a safe exit is achieved, the Astronaut-Explorer must create a path to return to the Base Ship. The only entrance to the Ship is made accessible by crossing the "deadly Pit". The floor of the Pit begins to open immediately upon his presence. He must make it safely through the

opening, or fall to his death in the Pit bottom.

When the Astronaut-Explorer safely crosses the Pit and reboards the Base Ship(10,000 points), his Mission has been successful. The game then continues with a new, faster-paced round of play.

The whole phase of play, described above, is based on a predetermined time, visually displayed on the cave surface. From the time the enemy ship lands, it continuously shoots through the wall of the Shelter Station. In order for a Mission to be totally successful, it must be completed before the Shelter Station, and then the Base Ship are successively destroyed by the enemy ship fire.

THE PIT
GAME INSTRUCTIONS

1. Insert Coin(s).
2. Select 1 or 2 Player Button.
3. Guide Astronaut through cave, to buried treasure, by forming tunnels with Laser Shooting Joystick.
4. Avoid falling rocks.
5. Shoot attacking enemy, score 200 points. Fire Button shoots only from a right or left direction.
6. Collect Blue Crystals from tunnel bottoms, score 1,000 Bonus points.
7. Secure treasure, score 2,000 points. Return to Base Ship, safely cross the "Pit" and reboard Ship, score 10,000 points.
8. Continue play with a new, faster-paced Mission.
9. Successful Mission must be completed before Shelter Station and Base Ship, on cave surface, are destroyed by enemy ship fire.

POINT SCORING

SHOOTING THE ENEMY - SCORE 200 POINTS FOR EACH

COLLECT THE BLUE GEM CRYSTALS - SCORE 1,000 BONUS POINTS FOR EACH

COLLECT THE BURIED TREASURE - SCORE 2,000 POINTS

INSTALLATION

Your game was shipped from the factory in ready-to-play condition. A brief inspection is suggested before the machine is removed from the carton. If there is damage to the shipping carton, contact the freight carrier for claim purposes. External damage could indicate possible damage to the cabinet and/or electronics components.

After the carton has been satisfactorily inspected, remove the machine from the shipping carton.

Examine the interior of the game for disconnected wires, cables, or harnesses. Make sure the electronic devices are securely mounted in their sockets, etc. Record the game serial number, since it will be required for reference and servicing.

ELECTRICAL REQUIREMENTS

Unless otherwise specified, this game is set to operate at 110 Volts A.C. (See Fig. 2 and 110/220 VAC conversion instructions.)

Power supply chasis schematic information and parts list are included in this manual.

110/220 VAC CONVERSION INSTRUCTIONS

This game contains a harness configuration which allows the machine to be operated from either a 110 VAC or 220 VAC, 50 H_Z or 60 H_Z power source. All games shipped from Centuri, Inc., are in the 220 VAC configuration. To change to the 220 VAC configuration follow the procedure below.

FIRST: Unplug the machine from the wall outlet to completely eliminate shock hazards.

SECOND: Remove the single 3 AMP slow-blow fuse found in the A.C. Distribution Bracket, and install two, 1.5 AMP slow-blow fuses. Next cut the #18 AWG. white jumper at both ends of the fuse holder, and replace the cover.

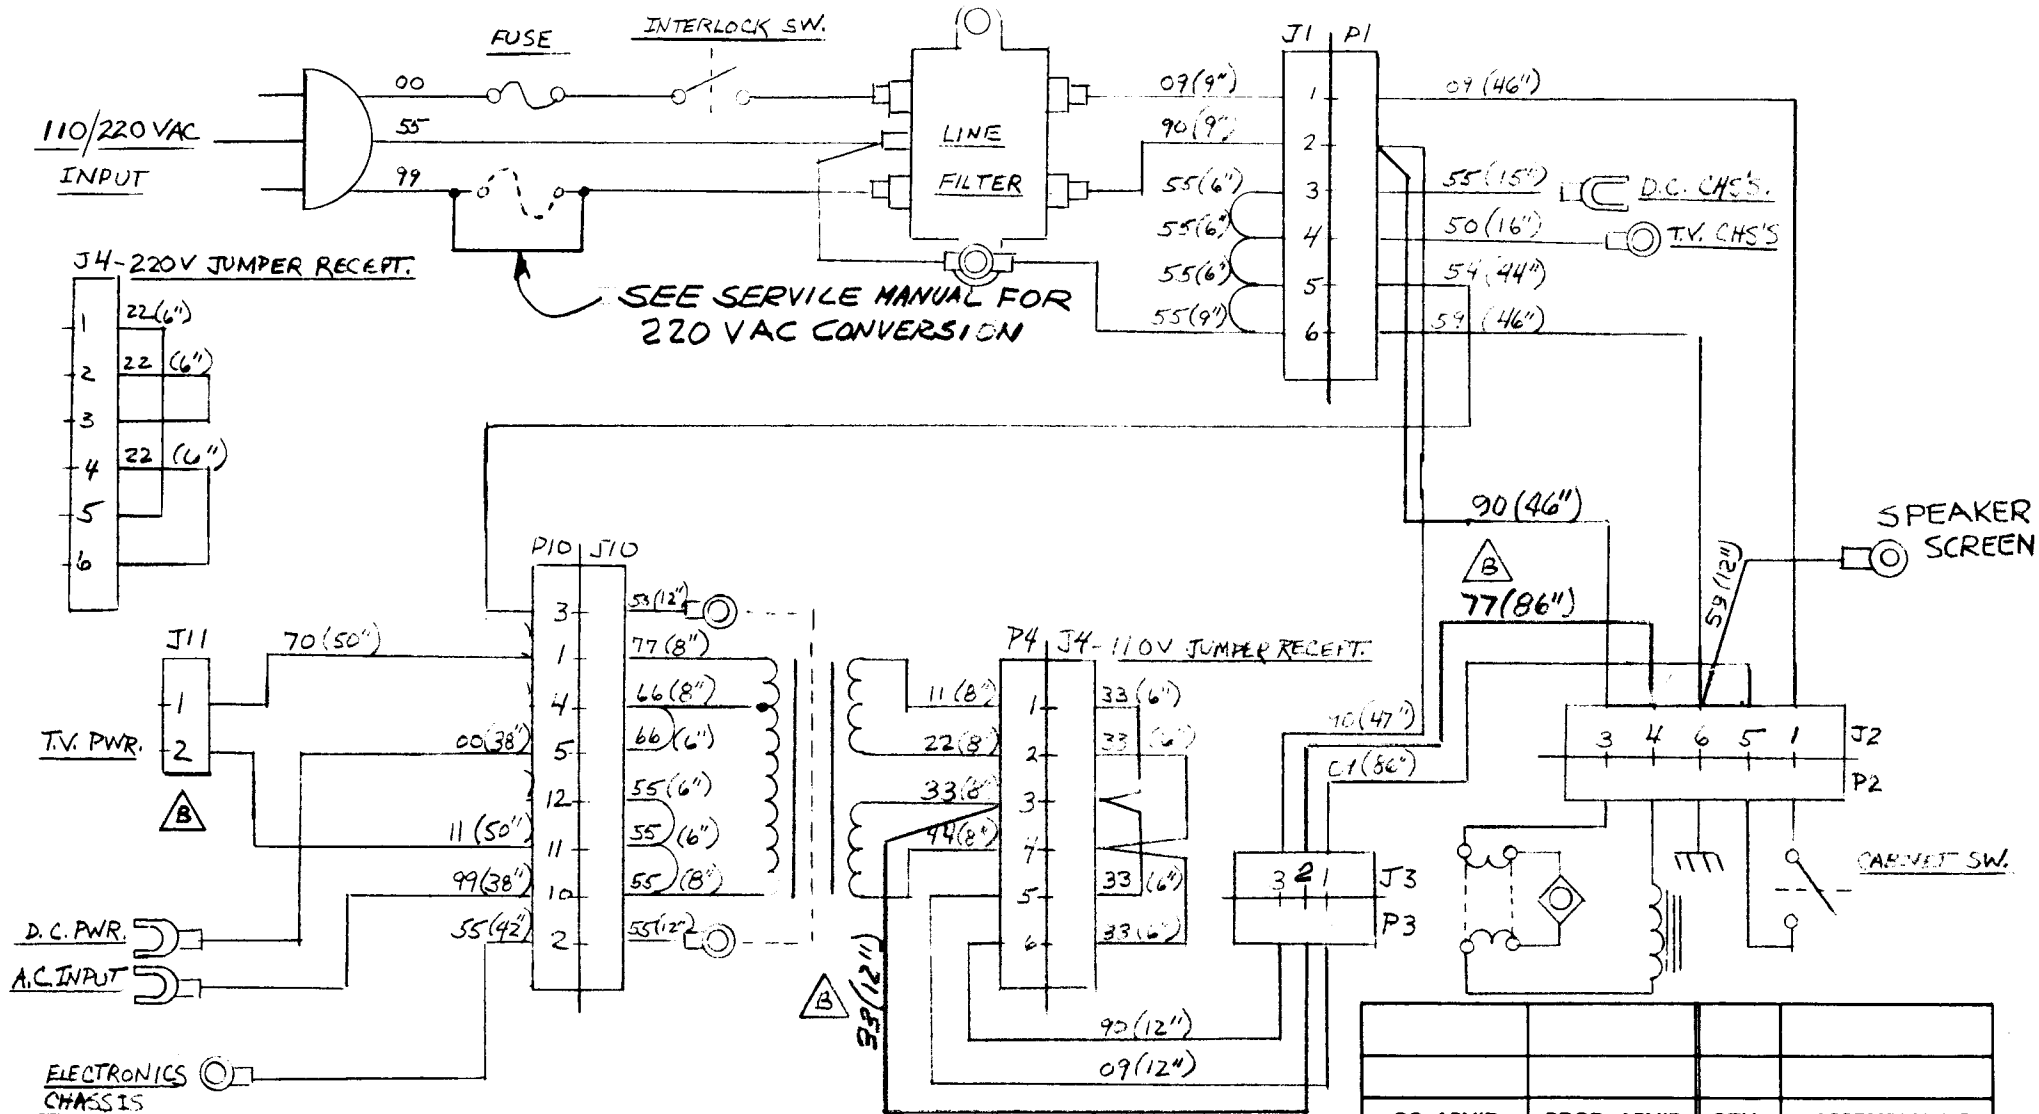

THIRD: On the game power transformer, locate the "orange" jumper plug which is marked, 110 VAC. Unplug the "orange" jumper, and plug in the "red" jumper marked 220 VAC.

To revert back to 110 VAC, replace the components originally removed from the Steps above.

***NOTE: The common side of the A.C. Line must not be fused in the 110 VAC configuration - Replace the #18 AWG., white jumper wire.

ROUTINE MAINTENANCE & SERVICE

Because of the solid state electronic circuitry, this machine should require very little maintenance, and only occasional adjustments. However, it is necessary to take steps to insure this.

The volume control is located on the bottom side of the printed circuit board, farthest from the side of the cabinet, and can be accessed through the rear door.

The video monitor has been properly adjusted before shipping. Occasionally minor adjustments are necessary. Technical information, along with schematics, can be found in this manual. Adjustment controls for the monitor are located on the rear of the monitor.

"DO NOT MAKE ANY ADJUSTMENTS ON THIS MACHINE WHILE THE POWER IS ON!" This machine should only be adjusted by a "qualified" technician.

POWER SUPPLY

The Computer Board in this game operates most efficiently and reliably when the power supply is set so the voltage on the Board is 5.0 Volts, ± 0.1 Volts. To check this, place a meter across 5 Volts, and ground, at the edge connector. If necessary, adjust the screwdriver control on the power supply, so the meter reads between 4.9 and 5.1 Volts.
